II. Key risks and uncertainties facing the issuer during the rest of the financial year.

Advance Terrafund REIT faces the common risks relevant to all public companies and economic bodies in the sector of real estate, namely the conjuncture of the market and

more specifically the agricultural land market, the liquidity of the investments, the comparatively low use of the investment property. The expectations of the Company are that the influence of these risks will not be considerable as the agricultural land market becomes increasingly more dynamic and liquid, and the market relations in the sector are encouraged through subsidies for the agricultural producers.

As of 31 March 2010 the financial assets and investments are denominated in BGN and EUR and under the conditions of the established currency board in the country the exchange rate of the BGN to the EUR is fixed and does not generate currency risks. Currently the Company has no exposures in currencies different than BGN and EUR.

The Company invests a minimum of 80% of its portfolio in land designated for agricultural use and up to 20% in land in urbanized areas. The land with agricultural designation is exposed to low risks from changes in prices and rents. The potential reduction of the prices of agricultural land is favorable for the investment policy of the Company, and the fixed increases of the rental price by 20% as compared to the previous year increase the profitability of the investments. The increased risk in the sector affects mainly real estate designated for construction and results from the global financial crisis. The present situation cannot pose a serious negative effect on the financial state and results from the activity of the Company; nevertheless it has undertaken measures for reduction of the share of property in urbanized territories with the aim of limiting the price risks.
